Figure 3: Universality-Individuality Plane (Step 5a)
Classes from the FDR-corrected tests, not from the position in the plane

f01: broadband weighted correlation
Universal 142 | Individual 0 | Both 0 | Neither 29

f06: broadband weighted node eigenvector
Universal 17 | Individual 0 | Both 0 | Neither 2

f10: broadband binary adjacency
Universal 58 | Individual 0 | Both 1 | Neither 112

f24: alpha binary adjacency
Universal 55 | Individual 0 | Both 1 | Neither 115

$I_{\text{diff}}(e)$

$U(e) = (U_1(e) + U_2(e))/2$

Node features: region
- Node region F
- Node region C
- Node region T
- Node region P
- Node region O

Edge features: region pair
F-F, F-C, F-T, F-P, F-O, C-C, C-T, C-P, C-O, T-T, T-P, T-O, P-P, P-O, O-O

Marker
- Node, or within-region edge
- Between-region edge
- Filled: U(e) significant at both sessions
- Open: U(e) not significant
- Black ring: I_diff(e) significant
